

CAM PROGRAM

Client Account Management

The CAM program pairs you with a dedicated account manager who handles every operational aspect of your algo trading — so you don't have to monitor screens, troubleshoot errors, or wonder if your algos are running.

THE PROBLEM IT SOLVES

Algo trading only works when everything is set up correctly and monitored constantly. Data feed drops, execution errors, misconfigured settings, and missed market events can silently drain your account — and most traders never even know it happened. CAM exists to close that gap.

ONGOING ACCOUNT MANAGEMENT

- Contract rollovers handled at the right time
- Algo updates installed as soon as new versions release
- Strategy optimization based on live performance
- Diversification guidance across multiple algos
- Scaling and reinvestment advice as accounts grow

WHY CAM VS. MANAGING IT YOURSELF

Running algos isn't passive. Between VPS logins, data feed issues, NinjaTrader errors, rollover management, and daily monitoring, it's a part-time job. CAM handles all of it.

Setup done right

Before the first trade fires, your CAM logs into your VPS and verifies every setting — algo stack, instruments, timeframes, contract months. One wrong setting can be catastrophic. A human checks every detail.

Private channel, real people

From day one you get a private Discord channel with your CAM, Rick (Lead Strategist), and Ed (CAM Lead). Direct access, near-immediate responses — not a ticket system, not a chatbot.

Peace of mind

Whether you're working, traveling, or on vacation, your accounts are actively monitored and managed every single trading day. You don't have to remember to turn the algos on or off.

WHAT'S INCLUDED — EVERY TRADING DAY

Pre-market verification

Algos enabled, data feed connected, accounts active — checked every morning before the market opens.

Live monitoring

Data feeds, algo execution, account status, and trade management throughout the session.

News & market events

Major news events and bank holidays tracked — algos adjusted or disabled when conditions are unfavorable.

Trade management

Ed, Rick, or Alex advise the team to move stops to breakeven, close non-performing trades, or disable strategies in real time — exclusive to CAM clients.

End-of-day report

Daily P&L, account balances, strategy performance, which algo ran on each account, and risk level — delivered every session close.

THE BOTTOM LINE

When you have CAM, you have a dedicated expert in your corner every single trading day — someone who knows what's working, what's not, and how to get you to your goals faster, while you focus on everything else.
